Action Items	What	Who	When

Agenda Item	TPCHD Update
Discussion Summary	<p>Burley Lagoon: All sample results were low.</p> <ul style="list-style-type: none"> • The two remaining properties in the NW corner of Burley Lagoon (BL024) are being pursued for an administrative search warrant. • Purdy Creek was sampled in the proximity of a property that was dye tested last fall after a failure was found and high counts in the creek during summer 2021. Dye test was negative and recent sampling (9/1/2022) confirmed that it is not impacting water quality in Purdy Creek at this time. New owners of property in 2022. Have submitted repair application for two properties they own at this location. <p>Filucy Bay: all uplands sample results from January were good. We are planning to conduct shoreline evaluation in Filucy Bay during wet season in March 2023.</p> <p>Rocky Bay: Water quality looks good.</p> <p>Vaughn Bay: all uplands sample results look good.</p> <ul style="list-style-type: none"> • We had sites of concern along DOH station 650. We dye tested a property that was dye tested 6-7 years ago. No dye detected. We sampled again after dye testing and results were low. We will not dye test the neighbor property at this time unless counts are high again. • High count near 650. Mobile home trailer code enforcement complaint received. We will work with code enforcement. • Met with PC storm water folks about implementing a storm water upgrade in Vaughn or Filucy Bay. We identify additional sampling sites that intersection Wright Bliss and Olson Drive. <p>Minter Bay: Added around 3 sites to uplands monthly sampling. Sent letter to one upland property owner but have not heard back from them. All sample results were low. We did sanitary survey work with DOH. We found one site with an RV with a discharge hose going to the ground. A code enforcement case was opened. No direct water quality impact from RV. Will be following up with code enforcement.</p> <ul style="list-style-type: none"> • We are thinking about having a septic social in Minter Bay.

Action Items			
--------------	--	--	--

Agenda Item	DOH Update		
-------------	------------	--	--

Discussion Summary	<p>Burley Lagoon: we are writing an annual review report using data from last year. The goal is to identify any downgrades or upgrades. Sample results looked good. Two restricted stations meet standards (694 & 772). Station 334 is close to being threatened. No downgrades.</p> <ul style="list-style-type: none"> Question: are we looking for upgrading the restricted area in Burley Lagoon? This will be added as a topic of discussion in the annual review report awaiting supervisor's decision. <p>Filucy Bay: 1 restricted station failed (275). No other failing stations. No threatened stations in Filucy Bay. All three stations that were failing a year ago are meeting conditions and no longer failing this year.</p> <p>Rocky Bay: Nothing is failing. The restricted station is still meeting standards. Compared to last year, station 21 went up but still in the teens. Prohibited station was failing last year but not this year.</p> <ul style="list-style-type: none"> Question: Are you looking at reclassified any station? This will be added as a topic of discussion in the annual review report awaiting supervisor's decision. <p>Vaughn Bay: Last year, station 613 was failing. This year, the results came down. All results decreased. Station 650 is still on the failing line. Station 611 is not failing. We have better closed period data at station 650 compared to open period data from three years ago. Overall, results are getting better.</p> <p>Minter Bay: station 308 had a slight decrease but still threatened. Station 850 is failing again. Compared to last year, there's no real change.</p> <ul style="list-style-type: none"> Question: Was there one or two events that raised the counts? There was one event on November 1st, 2022. Has Minter Bay been sampled since 11/1? No.
